Visual Evidence

One observed moment

Image evidence prompt

Submit one original screenshot or still of your Case Study 1 Atari game. Caption it with the title, version or platform when known, the scene shown, and its source. A relevant image from your first case study may be reused.

Requirements and potential deductions

- The image shows the original scene used for this redesign. (up to -0.5 points)
- The caption identifies the selected Atari game, scene, and image source. (up to -0.5 points)

Caption: International Open Gold Championship, The image showing the golf course overview, hole maps to choose from with side bars control.

Visual Redesign

Improvement goal

Response prompt

Identify one visual problem in the original scene and explain the mood or player experience your redesign should support. Refer to a specific detail in the original image.

Requirements and potential deductions

- Identifies a visual problem using a specific detail from the original scene. (up to -0.75 points)
- Explains the intended mood or player experience of the redesign. (up to -0.75 points)

Submitted response

The screen is too crowded with information mostly with large hole map on the right and the hole details on bottom. My redesign create more modern, and cleaner experience for players to see.

Revised palette

Response prompt

List your proposed colors and their roles, including any neutrals. Explain why this palette size and a named color relationship suit your improvement goal, and how contrast makes an important element stand out. Color names or swatches are sufficient; exact color codes are optional.

Requirements and potential deductions

- Identifies the proposed colors and what each is used for. (up to -0.5 points)
- Justifies the palette size and a named color relationship using the improvement goal. (up to -0.75 points)
- Explains a contrast choice that makes an important element stand out. (up to -0.75 points)

Submitted response

Proposing five color palettes including green for golf course and trees creating natural feeling playing. Light green for fairway w makes the playing area easier to distinguish. Sky blue for water and sky adding calm feeling. White for texts and dark gray for borders, outlines, and background areas to keep screen organized.

Redesigned scene

Image evidence prompt

Submit a colored sketch, annotated recoloring, or mockup of the same scene using your proposed palette. Include a gameplay element and an interface or state indicator. Keep an important state understandable without color alone, using a label, shape, or icon. Caption the image to identify the scene and your changes.

Requirements and potential deductions

- The redesign applies the proposed palette to the same scene's gameplay element and interface or state indicator. (up to -1.25 points)
- An important state has an understandable label, shape, or icon in addition to its color. (up to -1.25 points)

Caption: redesign

Look and feel decision

Response prompt

Explain one visual change beyond the palette, such as composition, interface layout, character shape, or an animation you would add. Connect it to a relevant Chapter 6 concept from vision, interface, ambience, or storytelling and explain its intended effect on the player. Describe motion in words if your sketch cannot show it.

Requirements and potential deductions

- Connects a specific visual change beyond the palette to a relevant Chapter 6 concept. (up to -0.75 points)
- Explains how that change would affect the player's experience. (up to -0.75 points)

Submitted response

I would probably move the hole map to an smaller panel in the top right corner and make golf course main focus. The concept chapter 6 visual hierarchy helps notice the players notice the elements first and large course view would make the gameplay e to follow, reduce the clutters, and overall create relaxing experience.

Evaluate the redesign

Response prompt

Compare your redesign with the original scene. Explain how the revised visuals work together to address your improvement goal while keeping the game's core actions and rules. Refer to a specific difference visible in the two images.

Requirements and potential deductions

- Evaluates the combined effect of the revised visuals on the improvement goal using a specific before-and-after difference. (up to -0.75 points)

- Explains how the original core actions and rules remain intact. (up to -0.75 points)

Submitted response

Making the visual details and objects easier to see, and helping the player to understand what to focus on. Comparing with orig
image the revised has an clear visuals to make the game easier to follow while keeping the game's original controls and action
same.
